

Vigil-i

Remote Surveillance and Communication

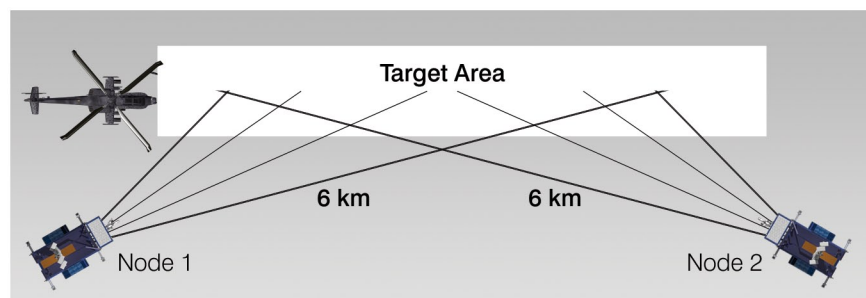

Features:

- A **15 metre high**, retractable utility platform built into a rough terrain trailer.
- **Protected internal storage** for sensitive electronic components.
- Has been used for target accuracy scoring in the **Australian Defence Force**.
- Applications for Vigil-i include:-
 - **Police and Major Incident Operations**
 - **Fire Fighting Operations**
 - **Event Management Security Surveillance**
 - **Emergency Services**
 - **Security Based Operations**

Vigil-i provides a range of surveillance and communications support options in remote and urban areas. It is easily set up in less than 45 minutes to provide a fast and reliable "on-the-ground" communications resource.

The system has been tested for use in Australian training environments for the RAAF and Australian Army. That application involved recording and analysis of helicopter and aircraft target accuracy during air-to-ground rocket trials. **From 6km, Vigil-i can report scores to an accuracy down to 1 metre.**

On board communications relay **real time video to a command post up to 20km line of sight using a digital microwave link**, or further when fitted with satellite link technology.

Vigil-i has proven its success to a very exacting requirement. It can be applied to a range of problems.

Vigil-i's superior capabilities are available for purchase, hire or lease, and comes with training, all documentation and operational support if required.
